

Discord Server

All competitors are required to use Discord for race day communication and notifications between events. Discord is also a great way for drivers to talk to each other using a headset.

It is highly recommended that all drivers run a headset for the events. We recommend the SteelSeries Arctis 7, which you can [buy directly from the FPZERO website](#).

You can also use your phone and earphones as a solution for audio chat if you do not have access to a headset.

All approved competitors will be sent a link to join the Discord server. Upon clicking the link, Discord will ask for confirmation to join the server.

Once accepted, you have full access to the server, chat, and announcement sections. The Valluga server is available from the channel section on the left navigation within Discord.
